 Havana, Cuba

PROFESSIONAL PROFILE

Computer Engineer with over 2 years of hands-on experience in full-stack development and technical leadership. Specialized in backend development with Python/Django, C#/.NET, Java, and REST API architectures. Led a team of 4 developers as Junior Project Manager on an international tourism project currently in production (<https://dev.dev.suntravelsonline.com/es>), managing 12 sprints and delivering 15 features in record time. Developed a package management system processing +10,000 monthly orders for 30+ branches. Excellent academic record (4.05/5.0 GPA), perfect grade on thesis project (5.0/5.0), recognized as Faculty Integral Student and awarded in scientific conferences. Seeking to contribute my technical skills in backend development, with growth towards frontend and AI-powered tool development, bringing leadership capability and passion for creating innovative solutions that generate real impact.

TECHNICAL SKILLS

Programming Languages: Python (Advanced), C# (Advanced), Java (Advanced), JavaScript (Intermediate), C (Advanced), TypeScript (Basic)

Web Development:

- **Frontend:** HTML5, CSS3, React, Vue.js (Basic), Bootstrap, jQuery (all Intermediate level except Vue)
- **Backend:** Django (Advanced), .NET/ASP.NET (Advanced), Spring Boot (Advanced), Node.js/Express (Advanced), FastAPI (Advanced)

Databases: PostgreSQL, MongoDB, SQLite (all Intermediate level)

ORM: Django ORM, Entity Framework, Hibernate

APIs & Integrations: REST APIs, GraphQL, WebSockets, Socket.io, Stripe, PayPal, OpenPay, Amadeus API

DevOps & Tools:

- **Containers & Deployment:** Docker, CapRover, Vercel (Intermediate level)
- **CI/CD:** GitHub Actions (Intermediate level)
- **Version Control:** Git, GitHub (Intermediate level)
- **Collaboration Tools:** Discord, Redmine, Notion, Anytype

Artificial Intelligence: PyTorch, GotOCR 2.0, OCR and image recognition techniques

Methodologies: Scrum, Agile, DevOps practices

Testing: JUnit

Operating Systems: Windows

Other Technologies: Godot Engine (game development)

PROFESSIONAL EXPERIENCE

Medialityc | Havana, Cuba

Junior Project Manager & Backend Developer

October 2025 - February 2026

Project: Suntravels - International Tourism Platform (Cancún, Mexico)

 <https://dev.dev.suntravelsonline.com/es>

- Led team of 4 developers managing complete development cycle in Scrum methodology with 12 sprints distributed across 3 stages
- Conducted meetings with international client, performed functional analysis and divided project into sprints with specific tasks for each team member
- Supervised review, approval and deployment of +40 pull requests ensuring code quality and compliance with established standards
- Developed complete User Management module with role-based authentication and granular access permissions
- Implemented Landing Administrative Management module allowing client to dynamically update content, destinations, attractions and blogs
- Integrated Amadeus API for real-time flight management, connecting with international airlines for search and bookings
- Designed and developed 15 key features for Stage 1 including complete billing system and request management module
- Successfully deployed web application in production serving 3 corporate clients simultaneously
- **Technologies:** C#, .NET Core, ASP.NET, PostgreSQL, Amadeus API, Git, Scrum methodology
- **Frontend developed by frontend team:** Next.js, Tailwind CSS

Note: System consists of public Landing page for end customers and administrative Backoffice for complete management of tourism services, products, users and billing.

Seasky | Miami, United States (remote)

Full-Stack Developer

August 2024 - June 2025

Project: International Package Management System Miami-Cuba

- Developed complete frontend and backend flows in system processing +10,000 monthly orders for 30+ active branches
- Implemented robust authentication system with role-based access control and granular permissions for different user types
- Designed and developed complete logistics module: adding packages to pallets, managing maritime and air containers, processing loose packages

- Created store module (backend) integrating multiple payment gateways for secure transactions and online order processing
- Developed order creation functionalities, customs status management for containers and complete distribution system in Cuba
- Used Django MVT (Model-View-Template) architecture optimizing system performance and maintainability
- Implemented dynamic functionalities with vanilla JavaScript significantly improving system user experience
- **Technologies:** Python, Django, PostgreSQL, JavaScript, HTML5, CSS3, Ubold template, Git, Scrum methodology

Note: Developed these features while attending 3rd year of degree until graduation, demonstrating time management skills and accelerated learning under pressure.

José Antonio Echeverría Technological University (CUJAE) | Havana, Cuba

Introduction to Programming Professor

August 2024 - January 2025 (6 months)

- Taught Introduction to Programming course in C language to 60 students from other faculties of the university
 - Designed instructional materials, presentations and practical exercises to facilitate learning of fundamental programming concepts
 - Advised students in algorithmic problem solving and development of structured computational thinking
 - Evaluated and provided feedback on final course projects
 - **Technologies:** C language, basic data structures, fundamental algorithms
-

FEATURED PROJECTS

Optical Character Recognition (OCR) System in images extracted from social networks

[Thesis Project - Grade: 5.0/5.0] | github.com/Fabo020323/Tesis

January 2025 - June 2025

- Developed OCR system specialized in text extraction from social media images using Deep Learning with PyTorch

- Researched and compared multiple computer vision models (Tesseract, EasyOCR, GotOCR 2.0, PaddleOCR) evaluating accuracy, speed and robustness against quality variations
 - Implemented GotOCR 2.0 model based on PyTorch achieving 92% accuracy in character detection in low-quality images
 - Created complete preprocessing, inference and post-processing pipeline for images with multiple filters and enhancement techniques
 - Reduced processing time by 35% through code optimizations and efficient GPU usage
 - Developed REST API with FastAPI for system integration in web applications
 - Processed dataset of +5,000 images from different social networks with variations in lighting, angles and resolutions
 - Documented research in thesis work obtaining maximum grade (5.0/5.0)
 - **Technologies:** Python, PyTorch, GotOCR 2.0, FastAPI, OpenCV, NumPy, Pandas, Django, Git
-

Agentes - Library Management System with Spring Boot

github.com/Fabo020323/Agentes | Academic Project

September 2024 - December 2024

- Designed and implemented complete REST API (backend) for university library administration with scalable architecture
- Developed bibliographic document management module with complete CRUD and detailed metadata (ISBN, authors, publisher, categories)
- Implemented loan system with lifecycle control, due dates, renewals and automatic notifications
- Created user management module with registration, JWT authentication and differentiated profiles (students, professors, administrators)
- Developed physical copy control system using unique barcodes for inventory tracking
- Configured complete security with Spring Security and JWT ensuring protection of sensitive endpoints
- Implemented custom filters for authentication and authorization by roles with granular permissions
- Enabled CORS for integration with React frontend developed by frontend team
- Documented API with Swagger/OpenAPI facilitating consumption by frontend development teams

- **Technologies:** Java 22, Spring Boot 3.3.3, MongoDB, Spring Security, JWT, Maven, Git
-

DonaVida - Blood Donation Platform

github.com/medialityc/donavida | Team Academic Project

July 2023 - August 2023

- Developed backend core of humanitarian platform connecting blood donors with people in need, avoiding disorganization in social networks
- Implemented central user management system with donor and recipient profiles including blood types, medical history and availability
- Created real-time chat module with WebSockets allowing direct and private communication between interested users
- Developed geolocation system integrating maps to find nearby donors and available donation centers
- Implemented donation request management module with lifecycle states, priority levels and automatic notifications
- Designed scalable backend architecture using Node.js and GraphQL for optimized queries and over-fetching reduction
- Collaborated with team of 7 developers using Git and Agile methodology with weekly sprints
- **Technologies:** Node.js, Express, GraphQL, MongoDB, WebSockets, Socket.io, Git

Note: Project with real social impact facilitating blood donation process in medical emergency situations.

Compress77 - Text File Compressor with Proprietary Algorithm

Academic Project - Recognition: Outstanding | 2nd Year

March 2023 - May 2023

- Designed and implemented text file compression algorithm using custom data structures (binary tree + graph)
- Achieved average compression of 70% in text files surpassing traditional algorithms in specific use cases
- Developed graphical user interface with JavaFX to facilitate compressor use by non-technical users
- Implemented character frequency analysis and repetitive pattern detection optimizing compression rate
- Obtained "Outstanding" recognition at Faculty Scientific Conference for algorithm innovation and implementation quality

- Worked in team of 4 people leading implementation of central algorithm and data structures
 - **Technologies:** Java, JavaFX, advanced data structures, custom compression algorithms
-

ArchiGenius - Computer Architecture Didactic Tool

Academic Project - Recognition: Relevant | 2nd Year

September 2022 - December 2022

- Developed educational desktop application for interactive teaching of Computer Architecture
 - Designed visual simulations of hardware components (CPU, RAM, data buses, ALU) to facilitate understanding of abstract concepts
 - Implemented interactive modules to learn functioning of fetch-decode-execute instruction cycles and processor pipeline
 - Created intuitive graphical interface with JavaFX including interactive practical exercises and automatic assessments
 - Obtained "Relevant" recognition at Faculty Scientific Conference for pedagogical innovation and practical utility
 - Contributed to learning of +100 students who used the tool as course complement
 - **Technologies:** Java, JavaFX, MVC design patterns, educational software development
-

EDUCATION

Computer Engineering

José Antonio Echeverría Technological University (CUJAE) | Havana, Cuba

Graduated: June 2025 | **GPA: 4.05/5.0 (Excellent)**

- **Thesis Project:** "Optical Character Recognition System Extracted from Social Network Images using Deep Learning with PyTorch" - **Grade: 5.0/5.0**
- **Recognition:** Faculty Integral Student (distinguished for maintaining excellent academic average while participating in multiple extracurricular activities, research and professional development)

- **Relevant Courses:** Data Structures, Advanced Algorithms, Databases, Software Engineering, Computer Architecture, Computer Networks, Artificial Intelligence, Compilers, Operating Systems
 - **Academic Recognitions:**
 - "Outstanding" Recognition - Compress77 Project at Student Scientific Conference (2nd year)
 - "Relevant" Recognition - ArchiGenius Project at Student Scientific Conference (2nd year)
 - **Teaching Assistant** in Discrete and Computational Mathematics
-

PROFESSIONAL INTERNSHIPS & RESEARCH

Research in Optical Character Recognition (OCR)

José Antonio Echeverría Technological University (CUJAE)

September 2022 - June 2025 (3 professional internships)

- Researched and compared Deep Learning models for OCR in social media images (Tesseract, EasyOCR, GotOCR 2.0, PaddleOCR)
 - Evaluated performance metrics: precision, recall, F1-score and inference speed of each model on diverse datasets
 - Analyzed performance under adverse conditions: low resolution, poor lighting, rotated text, multiple typefaces and visual noise
 - Implemented preprocessing pipelines (binarization, normalization, edge detection) improving baseline accuracy by 15-20%
 - Documented findings in detailed technical reports contributing to research department knowledge base
 - Presented results and conclusions in academic seminars of the faculty to professors and students
 - **Technologies:** Python, PyTorch, TensorFlow, OpenCV, scikit-learn, Jupyter Notebook, NumPy, Pandas
-

LANGUAGES

Spanish: Native language

English: Basic - B1 Certification (University)

- Reading: Intermediate (ability to read technical documentation in English)
 - Writing: Basic
 - Conversation: Basic
 - Listening comprehension: Basic
 - Understanding of tutorials and technical programming resources
-

SOFT SKILLS

- Technical team leadership
 - Complex problem solving
 - Collaborative teamwork
 - Effective communication
 - Fast and autonomous learning
 - Analytical thinking
 - Working under pressure and tight deadlines
 - Project management
 - Mentoring and teaching
 - Organization and planning
-

PROFESSIONAL INTERESTS

Current Specialization: Backend Development (Python/Django, C#/.NET, Node.js)

Growth Areas:

- Frontend Development (React, Next.js - learning in progress)
- Development of tools and applications powered by Artificial Intelligence
- Integration of Machine Learning models in production systems

- Microservices architectures and scalable systems

Industries of Interest:

- Enterprise software development and SaaS
 - Technology applied to tourism and services
 - Solutions based on Artificial Intelligence and Machine Learning
 - High social impact web platforms
-

ADDITIONAL INFORMATION

Event Participation

Global Game Jam 2022 - University of Computer Sciences (UCI), Havana

- Role: Developer of "Praedium" game using Godot Engine
- Team of 4 people completing functional game in 48 hours under pressure
- Experience in rapid prototyping and intensive collaborative work

Technology Communities

- Active member of **Stack Overflow** contributing to resolving community technical questions

Academic Volunteering

- Tutor of students from other faculties in CUJAE university scholarships
- Academic support in basic programming and mathematics for peers from lower courses

Teaching Experience

- Professor of Introduction to Programming (C) - 60 students (6 months)
 - Teaching Assistant in Discrete and Computational Mathematics
-
